### Plant Lover Proposal Website

From a very young age, I've always been fascinated with plants. Rather it was watching seedlings sprout from the ground, looking at the movements of vines, or being amazed at the details of the flowers, plants have always held a special place in my heart. As I grew older this fascination turned into a deeper love for plants and a desire to learn more about them. Plants are not just beautiful to look at but they also play an important role in our lives. They provide us with food, oxygen, and medicine, and they contribute to the balance of our ecosystems. Despite their importance, plants often go unnoticed and unappreciated. As a plant lover, I wanted to shine a light on the world of plants and the people who love them. I aim to explore the passion of plant lovers, their experiences, and the positive impact of plants on our physical and mental well-being. I believe that by understanding and appreciating plants, we can have a deeper connection with nature and lead more fulfilling lives. Through this project, I hope to inspire others to develop a love for plants and to recognize their importance in our lives.

During the interviews, I will ask questions about their experiences with plants, why they love them, and why they have learned about them. I will also research the benefits of plants on our physical and mental well-being. This will include studies that show the positive impact of plants on air quality, stress reduction, and overall well-being.

Through this project, I hope to gain a deeper understanding of the passion of plant lovers and their passion for the world of plants. What I hope to learn from this project is to understand why people become interested in plants and nature. This will include a deeper look of the role that childhood experiences, cultural backgrounds, and personal interests play in the development of a love for plants. Explore the ways which people learn about plants and how they can continue to expand their knowledge. This will include education, hands-on experiences, and self-directed learning. Interview professionals in the field of plants such as gardeners forests and farmers to learn about their experience and insight into the world of plants. This will include the reason of the challenges and rewards of working with plants and the knowledge that professionals have gained from their world. A few people I have in mind are my grandma, the person that got me into gardening, my former high school teacher that used to be a farmer, or my friends mother that is a planter and a self taught herbalist (someone who uses plants for healing), and hopefully I can talk to the owner of a flower shop near my apartment. I feel that all of them can give me a deeper understanding about plants.

I'm thinking the best option for this project is to make it a blog and the shop website is the best way to display information like the interviews for plants and plant lovers. First, a blog is the best way to share knowledge and expertise about plants. There could be articles talking about plant species, their care, and the benefits they offer. This can be informative and engaging content that educates and inspires others. Second, blogs are able to build a community of like-minded individuals who share the same love for plants. There could be comments so others in the community can talk to each other. This creates a sense of belonging and fosters a community of people who are passionate about plants. Lastly, making a blog and shop combination could sell plants, tools, and other items related to plants. The readers have the

opportunity to buy plants and accessories from the shop, making it a one-stop shop for everything plant related.
